Tunis, Tunisia | Open to relocation (Europe) & remote

SUMMARY

Final-year Computer Science engineering student who ships production-grade full-stack systems — from fixing critical security vulnerabilities in a live SaaS platform to integrating RAG-powered AI features and OAuth-based third-party APIs. Comfortable owning a feature end-to-end: backend architecture, frontend, and the AI layer connecting them.

PROFESSIONAL EXPERIENCE

Full-Stack Engineer (Graduation Project / PFE) — *KothonTech Ops & Persona* — *KothonTech GmbH (Munich/Tunis)* 02/2026 – 07/2026

- Co-built a two-module SaaS platform (Blue: ERP/ops — CRM, invoicing, billing, e-signature contracts, developer allocation; Persona: AI LinkedIn content studio) using NestJS, React 19, MongoDB Atlas across 7 Agile sprints, reaching 82k LOC with a SonarQube-passed quality gate
- Built a RAG-powered AI content assistant (post generation, conversational drafting, knowledge-base retrieval over uploaded brand material) using Groq (Qwen 3.6-27B) and MongoDB Atlas Vector Search, plus a separate FastAPI/scikit-learn microservice for expense classification and engagement prediction
- Identified and fixed 5 critical production security vulnerabilities (privilege escalation via unauthenticated role assignment, unguarded RBAC endpoints) and added 35+ backend/E2E tests (Jest, Playwright); automated 8 cross-module workflows in n8n

E-Health Intern — *Hope Horizon World (AI & E-Health)* 07/2025 – 08/2025

- Built a Python pipeline extracting structured clinical data (medications, diagnoses, history, exams) from unstructured patient notes via regex and fuzzy string matching against ICD-10/ICD-11 code tables, auto-classifying consultations into 4 specialty types
- Automated generation of TXT/PDF consultation reports (ReportLab) from extracted data, replacing manual report drafting with a single-command batch process across a 2,000+ line pipeline

Full-Stack Developer Intern — *Elite Council Consulting* 02/2025 – 04/2025

- Built an AI cover letter generator (OpenAI GPT-4o-mini, custom prompt engineering) with 4 writing styles, automatic template fallback, and PDF export, for an ATS-friendly CV/cover letter platform for Alexander Academy
- Owned backend integration across a 13-blueprint Flask app — reconciling inconsistent route-registration patterns between teammates' modules and centralizing shared infra (CORS, JWT auth, MongoDB connection, email service)

Software Development Intern — *ESPRIT (Company Immersion Internship)* 06/2024 – 07/2024

- Migrated a legacy school management system to a web-based architecture (Symfony, Oracle, PHP)

PROJECTS

LMS Data Integration for Personalized Learning 01/2025 – 04/2025

- Built the backend for a MERN-based e-learning platform (Express, MongoDB/Mongoose, Passport) with 5 OAuth providers (Google, GitHub, Facebook, LinkedIn, Azure AD), OTP email verification, and ~80 REST endpoints across 10 data models
- Integrated the GitHub REST API and Google Classroom API (OAuth2 with token refresh) to surface a user's repos and classes in-platform — matching GitHub repo languages to course content and pulling relevant YouTube videos per Classroom course via the YouTube Data API
- Built quiz creation/auto-scoring (point tallying, timeout handling) and the GitHub/Classroom frontend components

DevOps Dashboard & CI/CD Pipeline 12/2024 – 02/2025

- Built an 11-stage Jenkins pipeline (compile, test, SonarQube scan, Nexus deploy, Docker build/push, Compose deployment, health-check verification, monitoring setup) for a Spring Boot/MySQL service, with Docker Hub publishing, credential-based registry auth, and integrated Prometheus/Grafana monitoring

SKILLS

Front-end: React, Angular, HTML5, CSS3, Sass, Tailwind CSS, Bootstrap

Back-end & APIs: Python (Django, Flask), Java (Spring Boot), PHP (Laravel, Symfony), Node.js (NestJS)

AI/ML: Groq (Qwen), RAG, MongoDB Atlas Vector Search, NLP, Generative AI, FastAPI + scikit-learn

DevOps & Cloud: Docker, Jenkins, GitHub Actions, n8n, Prometheus, Grafana, SonarQube, Linux, AWS (Cloud Foundations)

Databases: MongoDB, MySQL, PostgreSQL, Neo4j

CERTIFICATIONS

AWS Academy Graduate — Cloud Foundations · CCNA: Switching, Routing & Wireless Essentials · Hashgraph Developer Course

EDUCATION

Engineering Degree in Computer Science — ESPRIT, 09/2021–09/2026 (expected) | Arabic (Native) · French (C1) · English (C1)
